Syllabus
Academic Year 2024-2025

1. General Information	
Course title	Probability and Statistics
Degree cycle (level)/major	BDA, IoT, SE
Year, term	2 nd Year, terms: 4,6
Number of credits	5
Language of delivery:	English
Prerequisites	Calculus, Linear Algebra, Discrete Mathematics
Postrequisites	Statistics and Data Science
Lecturer(s)	Anar Rakhimzhanova, Assistant Professor, PhD, a.rakhimzhanova@astanait.edu.kz, Astana IT University, Expo, C1 block, 3rd floor, office C1.1.337
2. Goals, Objectives and Learning Outcomes of the Course	
1. Course Description	This course covers fundamental statistical concepts and is related to computer science engineering. Topics include descriptive statistics; probability and random variables; sampling; statistical distributions; confidence intervals; hypothesis testing; regression.
2. Course Goal(s)	- Introduce students to the theory of probability, including applications to practical examples; - To develop the students' knowledge and understanding of statistics.
3. Course Objectives:	• Use Statistical Techniques in Decision Making: Students will learn how to apply statistical methods to make informed decisions based on data. This involves understanding which techniques are appropriate for different types of data and decision contexts • Draw Correct Inferences from Sample Data: The goal is to teach students how to make accurate conclusions from data samples, which involves understanding concepts like sampling error, confidence intervals, and significance testing. • Formulate Appropriate Statistical Hypotheses: Students will learn how to create and test hypotheses, which is crucial for conducting rigorous statistical analyses. This includes formulating null and alternative hypotheses and understanding their roles in hypothesis testing. • Correctly Interpret Statistical Statements: Emphasis is placed on interpreting statistical results and statements accurately. This helps in understanding the implications of statistical findings and avoiding common misinterpretations. • Focus on Clear Thinking Over Complex Math: Emphasize understanding concepts and thinking logically rather than just solving complicated math problems.

4. Skills & Competences	• Basic Math Skills: Use foundational math knowledge that students learned in Prerequisites to understand and apply statistical concepts. • Create and Evaluate Examples: Build and assess examples and counterexamples to illustrate and test statistical ideas.
5. Course Learning Outcomes:	By the end of this course students will be able to: • Apply Statistical Methods: Use statistical techniques to make informed decisions based on data. • Interpret Data Accurately: Draw correct conclusions from sample data and understand what the data is telling you. • Formulate and Test Hypotheses: Create and evaluate hypotheses to determine their validity. • Explain Statistical Results: Clearly explain what statistical results mean and how they should be understood. • Think Logically: Use logical reasoning to analyze and solve problems, focusing on understanding concepts rather than just performing complex calculations.
6. Methods of Assessment	Graded Activities: • Exams: Formal tests to check your understanding of the course material. • Homework Assignments: Tasks to complete outside of class that are graded. • Quizzes: Short tests given during the course to assess your knowledge on specific topics. Ungraded Activities: • Attendance: Regularly attending class will be noted. • Class Participation: Engaging in class discussions and activities will be monitored. Additional Ungraded Assessment Techniques: • In-Class Problems: Solving problems during class to show your understanding. • Direct Questioning: Answering questions posed by the instructor. • Student Questions: Discussing and answering your questions in class. • Office Hours: Participating in discussions during the instructor's office hours.
7. Reading List	Assigned reading materials and presentations should be read prior to class. Class lectures and discussions will proceed with supplemental and advanced topics, which could be difficult to understand unless students have read the assigned material. Readings are listed in the schedule section. All necessary updates and / or changes to the course will be reflected in the Learning Management System (moodle.astanait.edu.kz). <u>Basic Literature:</u> 1. Walpole, Myers, Myers, Ye. Probability and Statistics for Engineers and Scientists. 9th edition. 2016, Pearson.

	2. Sheldon Ross. Introduction to Probability and Statistics for Engineers and Scientists. 5th edition. 2014, Elsevier. <u>Supplementary literature:</u> 1. Sheldon Ross. First Course in Probability. 10th edition. 2019, Pearson Education. 2. Additional material and links to the web resources provided by the lecturers.
1. Resources	Online journals, article, papers, books and internet resources as well as online emulators and online software for simulation.
2. Course policy	Course and University policies include: Attendance: Attendance is not allocated any grading points in the marking scheme, but is compulsory to pass the course. Normally students are required to achieve course attendance of minimum 70% to get admitted to the examination rubric. In case a student misses 30% or more class sessions without a valid excuse the instructor has the right to mark him as “not graded”. In such case a student is not admitted to the exam and automatically fails the course. In cases, when a student misses class session due to valid reasons (is excused by the instructor or the dean’s office) he or she has to confirm the absence reason using a valid document in accordance with the academic policy of AITU. It should be NOTED that in cases when a student is excused for 30% of the scheduled class sessions or more he or she has to study material provided under the course on their own. Course instructor might provide additional opportunities to submit missed graded pieces of work during office hours or conduct alternative assessment exercises using method of his or her choosing. Preparation for Class: Class participation is a very important part of the learning process in this course. Although not explicitly grade, students will be evaluated on the QUALITY of their contributions and insights. Quality comments possess one or more of the following properties: - Offers a different and unique, but relevant, perspective; - Contributes to moving the discussion and analysis forward; - Builds on other comments. Class work: The duration of each lecture and practical lesson is 50 minutes for offline class, and 40 minutes for online class. Students are expected to complete all readings and assignments ahead of time, attend class regularly and participate in class discussions. In case of systemic student’s misconduct, the student can be dispensed from the classes. Being late on class: When students come to class late, it can disrupt the flow of a lecture or discussion, distract other students, impede learning, and generally erode class morale. Moreover, if left unchecked, lateness can become chronic and spread throughout the class. Therefore, the

being late to the class is not welcome and can have restriction activities by the course instructor.

Attestation I and II: Students, who score less than 25% for Attestation period I or Attestation period II (RK1/RK2) automatically fail the course.

Home work / Assignments: The assignments are designed to acquaint students with the theoretical knowledge and practical skills required for the course. The textbook readings will be supplemented with materials collected from recent professional articles and journals. In case of using someone's work (papers, articles, any publications), all works must be properly cited. Failure to cite work will be resulted as a cheating from the students and may be a subject of additional disciplinary measures.

Late submissions: Most assignments will be discussed in class on the due date. It is expected that all work will be submitted on time. All gradings are based using a percentage grading scale.

In the case of some extraordinary event, students should notify the course instructor and request an extension of the deadline for submission. If approved, a new date will be given to the student depending upon the circumstances by the instructor.

Final exam* / Final project:

Final exam will be held in written form. Review session and "Announcement and Study Guide" for the final exam will be provided by the lecturer.

Laptops and mobile devices can only be used for classroom purposes when directed by the course instructor. Misuse of laptops or handheld devices will be considered a breach of discipline and appropriate action will be initiated by the instructor.

Online lessons can be used in case if there won't be a chance to make offline traditional lessons. It must not discourage the interest and enthusiasm of students. The main software to run the online lessons is Microsoft Teams for video calls and live webinars, and Moodle (moodle.astanait.edu.kz) as a Learning Management System. Also, some alternatives such as Telegram, Zoom, or other messenger may be involved as an additional workaround.

Cheating and plagiarism are defined in the Academic conduct policies of the university and include:

1. Submitting work that is not your own papers, assignments, or exams;
2. Copying ideas, words, or graphics from a published or unpublished source without appropriate citation;
3. Submitting or using falsified data;
4. Submitting the same work for credit in two courses without prior consent of both instructors.

Any student who is found cheating or plagiarizing on any work for this course will receive 0 (zero) for that work and further actions will also be taken regarding academic conduct policies of the university.

	Academic Conduct Policies of the university: The full texts of all the academic conduct code will be posted to the students using Learning Management System (moodle.astanait.edu.kz). Contacting the Course instructor: The easiest and most reliable way to get in touch with the course instructor is by email. Students must feel free to send email if you have a question related to the course. Instructor responds as soon as they can but not always instantaneously. Besides that, students are also welcomed to arrange a one-to-one meeting with the instructor by their office during office hours to discuss the class using both offline and online.
--	---

** Final exam can be given by instructor in the any other forms such as Written Exam, Final Quiz, Oral Tasks and Exams, etc.*

3. Course Content

#	Abbreviation	Meaning
1	ISIS	Instructor-supervised independent work
2	SIS	Students' independent work
3	IP	Individual project
4	PA	Practical assignment
5	LW	Laboratory work
6	MCQ	Multiple choice quiz

3.1 Lecture, Practical/Seminar/Laboratory Session Plans

Week No	Course Topic	Lectures (H/W)	Practice sessions (H/W)	Lab. sessions (H/W)	TSIS (H/W)	SIS (H/W)
1	Introduction to Statistics , Data Analysis and Probability: sampling procedures, measures of location, measures of variability, discrete and continuous data, statistical modelling and graphical methods. Sample space, events, definitions of probability. Equally likely outcomes.	3	2	0	1	9
2	Conditional probability , Bayes' rule. Independent Events.	3	2	0	1	9
3	Random Variables . Discrete random variables; Continuous random variables. Jointly distributed random variables.	3	3	2	0	1
4	Expectation. Variance. Covariance . Properties of Expectation and Variance. Chebyshev's Inequality. Binomial Random Variables. Poisson Distribution.	3	2	0	1	9
5	The Uniform Random Variable . Normal Random Variable. Law of large Numbers. Midterm Exam.	3	2	0	1	9

6	Distributions of Sampling Statistics. The sample mean. The Central Limit Theorem. The sample variance. The t - Distribution. The F - Distribution.	3	2	0	1	9
7	Parameter Estimation. Maximum Likelihood Estimation. Interval Estimates. Confidence intervals for a normal mean.	3	2	0	1	9
8	Hypothesis Testing. Significance levels. general concepts, Type I and Type II errors. Testing means of a Normal Population. p-value, t-Test. Tests on two means.	3	2	0	1	9
9	Regression. Simple linear regression model, least squares and the fitted model, properties of least squares estimators, inferences for regression coefficients. Endterm Exam.	3	2	0	1	9
10	Residual analysis and model checking, prediction, correlation. Review for final exam.	3	2	0	1	9
	Total hours: 150	30	20	0	10	90

3.2 List of Assignments for Student Independent Study

Nº	Assignments (topics) for Independent study	Hours	Recommended literature and other sources (links)	Form of submission
1	2	3	4	5
1	Linear Algebra. Calculus. Discrete Algebra. Reviews	9	Reading list, books, internet resources Electronic version	Reading list, books, internet resources Electronic version
2	Homework Problems: Solve exercises provided to practice applying statistical methods and concepts.	9	Reading list, books, internet resources Electronic version	Reading list, books, internet resources Electronic version
3	Statistical Software Practice: Use statistical software to analyze data sets and practice creating graphs and tables.	9	Reading list, books, internet resources Electronic version	Reading list, books, internet resources Electronic version
4	Quiz Preparation: Review and study for upcoming quizzes by going over lecture notes, textbook material, and practice problems.	9	Reading list, books, internet resources Electronic version	Reading list, books, internet resources Electronic version
5	Statistical Software Practice: Use statistical software to analyze data sets and practice creating graphs and tables.	9	Reading list, books, internet resources Electronic version	Reading list, books, internet resources Electronic version
6	Concept Application: Apply	9	Reading list, books,	Reading list,

	statistical methods to everyday problems or scenarios to better understand their practical use.		internet resources Electronic version	books, internet resources Electronic version

4. Student Performance Evaluation System for the Course

Period	Assignments	Number of points	Total
1 st attestation	Assignments**: assignments Checking 1, Checking 2, Mid Term	50 10 20 20 50	100
2 nd attestation	Assignments**: assignments, Checking 3, Checking 4, End Term	50 10 20 20 50	100
Final exam*	Written Exam/Quiz		100
Total	0,3 * 1st Att + 0,3 * 2nd Att + 0,4*Final		100

****** The number of assignments can be different. It depends from the course program and designed by course syllabus. But the total points of the assignment are 60 in each control period.

***** Final exam can be given by instructor in the any other forms such as Written Exam, Final Quiz, Oral Tasks and Exams, etc.

Achievement level as per course curriculum shall be assessed according to the evaluation chart adopted by the academic credit system.

Letter Grade	Numerical equivalent	Percentage	Grade according to the traditional system
A	4,0	95-100	Excellent
A-	3,67	90-94	
B+	3,33	85-89	
B	3,0	80-84	Good
B-	2,67	75-79	
C+	2,33	70-74	
C	2,0	65-69	
C-	1,67	60-64	Satisfactory
D+	1,33	55-59	
D	1,0	50-54	
FX	0	25-49	
F	0	0-24	Fail

Based on the specific grade for each assignment, and the final grade, following criteria must be satisfied:

Grade	Criteria to be satisfied
90-100	- Work would be worthy of further dissemination under appropriate conditions - Mastery of advanced methods and techniques at a level beyond that explicitly taught - Ability to synthesize and employ in an original way idea from across the subject - Outstanding command of critical analysis and judgment
80-89	- Excellent range and depth of attainment of intended outcomes - Mastery of a wide range of methods and techniques - Evidence of study and originality of what has been taught - Able to display a command of critical analysis and judgement
70-79	- Attained all the intended learning outcomes for a unit - Able to use well a range of methods and techniques to come to conclusions - Able to employ critical analysis and judgement
60-69	- Some limitations in attainment of learning objectives, but has managed to grasp most of them - Able to use most of the methods and techniques taught - Evidence of study and comprehension of what has been taught but grasp insecure - Some grasp of the issues and concepts underlying the techniques and material taught, but weak and incomplete
50-59	- Attainment of only a minority of the learning outcomes - Able to demonstrate a clear but limited use of some of the basic methods and techniques taught - Weak and incomplete grasp of what has been taught - Deficient understanding of the issues and concepts underlying the techniques and material taught
25-49	- Attainment of nearly all the intended learning outcomes deficient - Lack of ability to use at all or the right methods and techniques taught - Inadequately and incoherently presented - Wholly deficient grasp of what has been taught - Lack of understanding of the issues and concepts underlying the techniques and material taught
0-24	No significant assessable material, absent or assessment missing a must pass component

5. Methodological Guidelines

Assessment is administered continuously throughout the course. The students are rated against their performance in continuous rating administered throughout the semester (60%) and summative rating done during the examination session (40%), total 100%. Continuous rating is students' on-going performance in class and independent work. Class work is assessed for attendance, laboratory works' defense and in- class assessments.

- **ISIS (Instructor Supervised Student Independent Study)** -comprises presentation to be done by students independently and checked by instructor.
- **Mid-term and End-term** is a review of the topics covered and assessment of each student's knowledge. The form of the midterm and end term exams is complex.
- **Final assessment** is a combination of both individual (team) project (report) and oral presentation (slides) to evaluate the students' academic performance and professional skills. At the completion of this course each student has to submit an online project version conforming to the project outline, as well as to prepare and present a slide presentation that follows the presentation outline. Project iterations would be required to submit as well.

Students should submit the written Report of Final project and slide-Presentation 3 days before the Final exam day.

6. Lecturer (lecturers) approvals Full name Job title Date Sign
