Syllabus
Academic Year 2024-2025

1. General Information	
Course title	Finite Volume Method
Degree cycle (level)/major	6B06106 MCS
Year, term	2,3
Number of credits	5
Language of delivery:	English
Prerequisites	Numerical methods , Calculus, I,II,III, Linear Algebra, PDE
Postrequisites	
Lecturer(s)	1. Rakhymzhan Kazbek, Ph.D. in Applied Mathematics, Assistant Professor, Astana IT University, Expo C1.1.336 r.kazbek@astanait.edu.kz .
2. Goals, Objectives and Learning Outcomes of the Course	
1. Course Description	Finite Volume\Element method is the mainstay in many engineering fields. This course aims to provide a preliminary finite element basis knowledge which can be extended further for more sophisticated real-life applications.
2. Course Goal(s)	(1) To understand major numerical methods for PDEs and the associated computer implementation (2) To be able to apply the numerical methods to solve a variety of linear science and engineering problems with hand calculations and computer simulations (3) To be able to apply the numerical methods for solutions of some nonlinear problems (4) To be able to complete a course project with a written report and conduct presentations
3. Course Objectives:	Numerical solution of the PDEs are of great importance to be solved to leverage the benefits of the accurate simulations. It is commonality that many nonlinear PDEs cannot be solved in their closed form, as semi-linear or nonlinear problems might describe the natural phenomenon which happen in real life. Therefore, it is crucial to develop an accurate and stable numerical solution for various type of modelling problem found in different applied fields such as: Finance, Mechanical engineering, Aerospace engineering, Fluid dynamics, Heat transfer, Mathematical biology and many more.

4. Skills & Competences	• Construction of the discretizations in time and space directions • Implementation of the Finite Element subroutines via high and low level programming languages • Option pricing applications, such as Black Scholes to be solved by FEM and FDM • Creation of the uniform and nonuniform meshes with variable step sizes in both temporal and spatial directions.
5. Course Learning Outcomes:	Finite Volume satisfies the university core curriculum requirement in Mathematics: “<i>Students graduating from Astana IT University should be able to demonstrate the ability to apply quantitative and logical skills to solve problems.</i>” It meets the TTU general education student learning outcomes for mathematics that students will: Apply arithmetic, algebraic, geometric, statistical and logical reasoning to solve problems. Represent and evaluate basic mathematical and/or logical information numerically, graphically, and symbolically. Students will become proficient in techniques of differentiation, understand the concept of rate of change and how to use it to solve real world problems, the concept of definite and indefinite integral and their relations to area and rate of change. In particular, the students will Be able to explain the concept of continuous functions Differentiation to solve related rate and optimization problems Compute definite and indefinite integrals
6. Methods of Assessment	The expected learning outcomes for the course will be assessed through graded activities and ungraded activities. The graded activities include projects, homework, and midterms. The ungraded activities will be used to monitor your progress. A variety of these ungraded assessment techniques may be employed, including problems to be completed during class, direct questioning of students, answering students questions in class, one-minute classroom assessment techniques, and discussions during office hours.
7. Reading List	Assigned reading materials and presentations should be read prior to class. Class lectures and discussions will proceed with supplemental and advanced topics, which could be difficult to understand unless students have read the assigned material. Readings are listed in the schedule section. All necessary updates and / or changes to the course will be reflected in the Learning Management System (moodle.astanait.edu.kz). <u>Basic Literature:</u> 1.H. Elman. Finite elements and fast iterative solvers 2. D.Wei. An introduction to linear finite element analysis. <u>Supplementary literature:</u> 1. Finite Element and Finite Volume Methods for Heat Transfer and Fluid Dynamics [Текст] / J.N.Reddy [и др.]. - USA : Cambridge University Press, 2023. - 385 p. - ISBN 978-1-00-927548-4 (Hardcopy is offline in the library)
1. Resources	Online journals, article, papers, books and internet resources as well as online emulators and online software for simulation.
2. Course policy	Course and University policies include:

Attendance:

Attendance is not allocated any grading points in the marking scheme, but is compulsory to pass the course. Normally students are required to achieve course attendance of minimum 70% to get admitted to the examination rubric.

In case a student misses 30% or more class sessions without a valid excuse the instructor has the right to mark him as “not graded”. In such case a student is not admitted to the exam and automatically fails the course.

In cases, when a student misses class session due to valid reasons (is excused by the instructor or the dean’s office) he or she has to confirm the absence reason using a valid document in accordance with the academic policy of AITU.

It should be NOTED that in cases when a student is excused for 30% of the scheduled class sessions or more he or she has to study material provided under the course on their own. Course instructor might provide additional opportunities to submit missed graded pieces of work during office hours or conduct alternative assessment exercises using method of his or her choosing.

Preparation for Class: Class participation is a very important part of the learning process in this course. Although not explicitly grade, students will be evaluated on the QUALITY of their contributions and insights. Quality comments possess one or more of the following properties:

- Offers a different and unique, but relevant, perspective;
- Contributes to moving the discussion and analysis forward;
- Builds on other comments.

Class work: The duration of each lecture and practical lesson is 50 minutes for offline class, and 40 minutes for online class. Students are expected to complete all readings and assignments ahead of time, attend class regularly and participate in class discussions. In case of systemic student’s misconduct, the student can be dispensed from the classes.

Being late on class: When students come to class late, it can disrupt the flow of a lecture or discussion, distract other students, impede learning, and generally erode class morale. Moreover, if left unchecked, lateness can become chronic and spread throughout the class. Therefore, the being late to the class is not welcome and can have restriction activities by the course instructor.

Attestation I and II: Students, who score less than 25% for Attestation period I or Attestation period II (RK1/RK2) automatically fail the course.

Home work / Assignments: The assignments are designed to acquaint students with the theoretical knowledge and practical skills required for the course. The textbook readings will be supplemented with materials collected from recent professional articles and journals. In case of using someone’s work (papers, articles, any publications), all works must be

	properly cited. Failure to cite work will be resulted as a cheating from the students and may be a subject of additional disciplinary measures. Late submissions: Most assignments will be discussed in class on the due date. It is expected that all work will be submitted on time. All gradings are based using a percentage grading scale. <i>In the case of some extraordinary event, students should notify the course instructor and request an extension of the deadline for submission. If approved, a new date will be given to the student depending upon the circumstances by the instructor.</i> Final exam* / Final project: Final Project is the development of the Finite Element mathematical formulation, including: Integration of the linear and quadratic basis functions over element local and global finitely discretied domain Also Finite Difference method will be used for benchmarking and validation of the FEM. Method of manufactured solution shall be supplemented at each stage of the leading process to verify and detect the code and implementational issues. Laptops and mobile devices can only be used for classroom purposes when directed by the course instructor. Misuse of laptops or handheld devices will be considered a breach of discipline and appropriate action will be initiated by the instructor. Online lessons can be used in case if there won't be a chance to make offline traditional lessons. It must not discourage the interest and enthusiasm of students. The main software to run the online lessons is Microsoft Teams for video calls and live webinars, and Moodle (moodle.astanait.edu.kz) as a Learning Management System. Also, some alternatives such as Telegram, Zoom, or other messenger may be involved as an additional workaround. Cheating and plagiarism are defined in the Academic conduct policies of the university and include: 1. Submitting work that is not your own papers, assignments, or exams; 2. Copying ideas, words, or graphics from a published or unpublished source without appropriate citation; 3. Submitting or using falsified data; 4. Submitting the same work for credit in two courses without prior consent of both instructors. Any student who is found cheating or plagiarizing on any work for this course will receive 0 (zero) for that work and further actions will also be taken regarding academic conduct policies of the university. Academic Conduct Policies of the university: The full texts of all the academic conduct code will be posted to the students using Learning Management System (moodle.astanait.edu.kz). Contacting the Course instructor: The easiest and most reliable way to get in touch with the course instructor is by email. Students must feel free to send email if you have a question related to the course. Instructor responds as soon as they can but not always instantaneously. Besides that, students are also welcomed to arrange a one-to-one meeting with
--	---

	the instructor by their office during office hours to discuss the class using both offline and online.
--	--

* Final exam can be given by instructor in the any other forms such as Written Exam, Final Quiz, Oral Tasks and Exams, etc.

3. Course Content

#	Abbreviation	Meaning
1	ISIS	Instructor-supervised independent work
2	SIS	Students' independent work
3	IP	Individual project
4	PA	Practical assignment
5	LW	Laboratory work
6	MCQ	Multiple choice quiz

3.1 Lecture, Practical/Seminar/Laboratory Session Plans

Week No	Course Topic	Lectures (H/W)	Practice sessions (H/W)	Lab. sessions (H/W)	TSIS (H/W)	SIS (H/W)
1	Parabolic and Elliptic PDE types: Linear and Nonlinear. Closed form classical solutions.	3	2			PA5, 10
2	Finite Difference Method and Finite Volume method.	3	2			PA5, 10
3	Strong and weak forms. Hilbert, Sobolev, L^2 integrable function spaces.	3	2			PA5, 10
4	Galerkin method, Rayleigh Ritz, Discontinuous Galerkin methods.	3	2			PA5, 10
5	Linear and Quadratic Lagrangian test functions. Local and Global Element Matrices. Assembling.	3	2			PA5, 10
6	Poisson Equation via FDM and FEM method. Heat equation and Euler time-integration scheme.	3	2			PA5, 10
7	Method of manufactured solutions.	3	2			PA5, 10
8	Financial Engineering introduction.	3	2			PA5, 10
9	Black Scholes PDEs. Call and Put options. Transformations.	3	2			PA5, 10

10	Software development and validation. MATLAB and C++ implementation of the FEM routines.	3	2			PA5, 10
	Total hours: 150	30	20	...	...	100

3.2 List of Assignments for Student Independent Study

No additional assignments are assigned for the self-study apart from the HW.

4. Student Performance Evaluation System for the Course

Period	Assignments	Number of points	Total
1 st attestation	Assignments**: a. 2 Homework b. Midterm	20+20 60	100
2 nd attestation	Assignments**: a. 2 Homework b. Preliminary project	20+20 60	100
Final exam*	TP	100	100
Total	0,3 * 1st Att + 0,3 * 2nd Att + 0,4*Final		100

****** The number of assignments can be different. It depends from the course program and designed by course syllabus. But the total points of the assignment are 60 in each control period.

***** Final exam can be given by instructor in the any other forms such as Written Exam, Final Quiz, Oral Tasks and Exams, etc.

Achievement level as per course curriculum shall be assessed according to the evaluation chart adopted by the academic credit system.

Letter Grade	Numerical equivalent	Percentage	Grade according to the traditional system
A	4,0	95-100	Excellent
A-	3,67	90-94	
B+	3,33	85-89	Good
B	3,0	80-84	
B-	2,67	75-79	
C+	2,33	70-74	
C	2,0	65-69	Satisfactory
C-	1,67	60-64	
D+	1,33	55-59	

D	1,0	50-54	Fail
FX	0	25-49	
F	0	0-24	

Based on the specific grade for each assignment, and the final grade, following criteria must be satisfied:

Grade	Criteria to be satisfied
90-100	- Work would be worthy of further dissemination under appropriate conditions - Mastery of advanced methods and techniques at a level beyond that explicitly taught - Ability to synthesize and employ in an original way idea from across the subject - Outstanding command of critical analysis and judgment
80-89	- Excellent range and depth of attainment of intended outcomes - Mastery of a wide range of methods and techniques - Evidence of study and originality of what has been taught - Able to display a command of critical analysis and judgement
70-79	- Attained all the intended learning outcomes for a unit - Able to use well a range of methods and techniques to come to conclusions - Able to employ critical analysis and judgement
60-69	- Some limitations in attainment of learning objectives, but has managed to grasp most of them - Able to use most of the methods and techniques taught - Evidence of study and comprehension of what has been taught but grasp insecure - Some grasp of the issues and concepts underlying the techniques and material taught, but weak and incomplete
50-59	- Attainment of only a minority of the learning outcomes - Able to demonstrate a clear but limited use of some of the basic methods and techniques taught - Weak and incomplete grasp of what has been taught - Deficient understanding of the issues and concepts underlying the techniques and material taught
25-49	- Attainment of nearly all the intended learning outcomes deficient - Lack of ability to use at all or the right methods and techniques taught - Inadequately and incoherently presented - Wholly deficient grasp of what has been taught - Lack of understanding of the issues and concepts underlying the techniques and material taught
0-24	No significant assessable material, absent or assessment missing a must pass component

5. Methodological Guidelines

Assessment is administered continuously throughout the course. The students are rated against their performance in continuous rating administered throughout the semester (60%) and summative rating done during the examination session (40%), total 100%. Continuous rating is students' on-going performance in class and independent work. Class work is assessed for attendance, laboratory works' defense and in- class assessments.

- **ISIS (Instructor Supervised Student Independent Study)** -comprises presentation to be done by students independently and checked by instructor.
- **Mid-term and End-term** is a review of the topics covered and assessment of each student's knowledge. The form of the midterm and end term exams is complex.

- **Final assessment** is a combination of both individual (team) project (report) and oral presentation (slides) to evaluate the students' academic performance and professional skills. At the completion of this course each student has to submit an online project version conforming to the project outline, as well as to prepare and present a slide presentation that follows the presentation outline. Project iterations would be required to submit as well. Students should submit the written Report of Final project and slide-Presentation 3 days before the Final exam day.
